

THE ULTIMATE **PRISMA** COLLECTION

FRANS VERMEULEN

ULTIMATE PRISMA COLLECTION

Frans Vermeulen's first bestselling book, the Synoptic Materia Medica (aka the 'Silver Book') was published in 1992 and was an instant success. The Concordant Materia Medica (1994) continued this success and is still the classical materia medica of choice for the serious homeopath. These were later joined by the Synoptic Materia Medica II (1998) then the incomparable Prisma (2002). As ground-breaking and useful as each of these books were when they were published, time marches on and there have been significant advances in knowledge, experience, homeopathic development and the understanding of the homeopathic materia medica. For those reasons, at long last each book has been fully upgraded, revised and enlarged, taking into consideration new and significant developments in botany, scientific knowledge and homeopathic practice understanding of source-based prescribing. The result is the four volume set called The Ultimate Prisma Collection.

Homeopaths often wonder why they should replace their older versions of Vermeulen's books with these new editions. The answer is the same as why you regularly upgrade your mobile phone, computer, car and any number of modern everyday essentials. Would you run your practice with a 20 year old computer? So why rely on reference texts of the same vintage? We all value the pillars of classical homeopathy – Hahnemann, Hering, T.F.Allen and Clarke – but to do great work, it is vital to supplement their teachings with those from modern authors and up to date information. This is exactly what each volume of The Ultimate Prisma Collection delivers for the modern homeopath.

Independent publishers of healthcare books for
professionals and the public

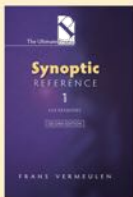

Concordant Reference embraces both an expansion and an essential revision of the Concordant Materia Medica as published in its second version in 1997. Two major revisions have been implemented in this edition.

[1] Source materials and remedy names in the classic materia medica have been upgraded and/or corrected to current scientific standards.

[2] T.F. Allen Encyclopedia of Pure Materia Medica and his Handbook of Materia Medica and Homeopathic Therapeutics has been added to the existing text, in order to ensure the most complete coverage of classical materia medica possible in a single volume. This also means that Hahnemann's works are now included in full!

The newly added T.F. Allen material enhances the Concordant with *caused* symptoms, elicited by provings and poisonings to balance Hering's Guiding Symptoms, which are predominantly *cured* symptoms from clinical practice. Thus, the latest edition brings an equilibrium between caused and cured symptoms, creating a better balance between provings and clinical findings and better informing the prescriber. We might say that the harmony between art and science has been restored! The total number of remedies is 1284 in this expanded and revised edition, compared to 847 in the original edition.

Synoptic Reference 1 contains 505 remedies, encompassing 375 traditional and 130 new homeopathic remedies. Each remedy is described in Frans Vermeulen's unique *synoptic* format, combining wide-ranging, correlative source and substance information with essential materia medica details and data. The materia medica details and data are derived from 739 provings and 350 self-experimentations

conducted over more than 200 years in a wide range of countries. All remedies have a repertory section adapted from Frederik Schroyens' Synthesis or Roger van Zandvoort's Complete Repertory. This text is a significant expansion of the original Synoptic 1, which contained only 193 remedies.

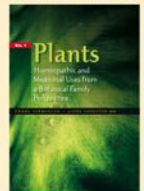

Synoptic Reference 2 contains 606 homeopathic remedies – 136 lesser known classical remedies and 470 new, mostly unpublished ones. Each remedy is described in Frans Vermeulen's unique *synoptic* format, combining wide-ranging, correlative source and substance information with essential materia medica details and data. The number of trials included in SR 2 is as follows: 'traditional' provings 515; self-experimentations [solo trials] 119; trituration provings 38; dream provings 16; meditative provings 9; seminar provings 8; poisonings and crude substance experiments 27. There are 35 remedies for which only a clinical pathogenesis could be found. All remedies have a repertorium section adapted from Frederik Schroyens' Synthesis or Roger van Zandvoort's Complete Repertory. This text is a significant expansion of the original Synoptic 2, which contained only 335 remedies.

Prisma Reference is a unique materia medica of 222 homeopathic remedies, 195 classical and 27 modern assembled from a wide variety of original sources. All remedies are explored and studied according to the source substance, their leading symptoms and their therapeutic properties. The detailed substance descriptions are designed as an enrichment and expansion to traditional materia medica as well as an insight into the *essence* of the remedies, the understanding of which will aid prescribing. The symptom section is divided into four categories: Mental, General, Sensation, and Local. Also included is an extensive selection of case reports, comprising 240 full reports, 401 brief case histories and 48 special reports.

Also by Frans Vermeulen

Plants - Homeopathic and Medicinal Uses from a Botanical Family Perspective details over 2000 individual plant remedies classified in 150 botanic families and draws on a wealth of information from provings, clinical observations, herbal uses, folklore, mythology, botany, toxicology and other sources. In addition, the detailed clinical case studies from Dr Linda Johnston offer a real world perspective. This beautifully presented 5,000 page work in 4 volumes is an essential reference for the professional homeopath.

1773 remedies total
